

VS PROFELT

VS Profelt treatment for worn and loose key bushings, is the new "miracle" lubricant cure that technicians all over the country have been talking about. Soaking the key bushings with VS Profelt and using a brass caul overnight produces dramatic results as shown in the above before and after photo.

Originally intended for key bushings, we have now discovered success in many other applications. It is perfect for easing damper guide rail bushings by soaking and inserting a #7 bridge pin overnight.

Technicians have been reporting in with success in other applications including damper felt fitting (using the string as the caul), trapwork and pedal guide bushings, sostenuto and damper pitman bushings, action centers and hammers.
